

CHEMICAL

Finest pesticide suspension in agriculture

THE APPLICATION SCOPE / PURPOSE

Pesticides are chemicals or microorganisms used to inhibit or kill pests. The mode of action of pesticides varies. Pesticides can be dispersed in a suspension so that they can easily be sprayed. The particle size of the suspension not only influences the clogging of the application nozzle, but also the penetration of the active ingredient into the plant. Penetration can generally be improved when the particle size is small. Kinematica offers solutions in the field of pesticide suspension production.
