Shower gel with gas bubbles for natural opacity

THE APPLICATION SCOPE / PURPOSE

Shower gel is used for body cleansing during showering. It is a surfactant containing liquid, often with a high viscosity and gel-like structure. The surfactants are responsible for skin cleansing and foam. Additionally, the shower gel may contain thickening agents, conditioning agents, moisturizers and refatting agents. The appearance can be changed by colour or opacifiers. Kinematica has a solution for dispersing gas bubbles. The refraction of the light at the gas bubble results in a milky appearance without using additional additives.
